Methodist Children's Hospital Pediatric Outreach Department

1

CME/CNE HOURS

When: April 25, 2019

Time: 11:30pm - 1:00 pm, lunch will be provided

Where: Connally Memorial Medical Center
Large Conference Room
499 Tenth St., Floresville, TX 78114

Learning Objectives

- Categorize the types of drownings.
- Describe the significance of the epidemiology and risk factors associated with drownings.
- Distinguish fresh from salt water drowning.
- Recognize, identify and manage the pathological end-organ effects that occur secondary to drowning.
- Describe key pre-hospital treatment in the care and management of a drowning victim.
- Identify the goals of treatment related to pathological end-organ effects in the overall care and management of the drowning victim in the emergency department and while hospitalized.
- List three possible outcomes that occur from the drowning process.
- Apply learned knowledge in the presented case discussions.
- List the factors associated with drowning presentations that are associated to poor outcomes.
- Recognize and summarize several of the misconceptions that are associated with a victim of drowning.
- Identify prevention strategies as a means of reducing the incidence of drowning.
